

Steps To A Successful Project

1. Estimating | 3-5 Business Days

We will do take-offs based on your architectural drawings and send you a pricing estimate.

2. Field Measurements

We will send our Field Estimator to measure your space.

If this is a print & ship project, please measure your space and provide us with the dimensions. Photos of the space are also requested if possible.

3. Elevations | 2-3 Business Days

Measure your space and provide us with the dimensions. Photos of the space are also requested if possible.

4. Strike-Off | 2-3 Business Days To Arrive

We will send samples for material type and color for your review and approval.

5. Production | 7-10 Business Days After Elevation & Sample Approvals

Once you've approved the elevation and samples, your project moves into production! After production is complete, we will either ship your project to you or contact you to schedule installation.

6. Installation | 2-3 Business After Production Completed

We will work with you to schedule at a time that works best for you. The installation time frame depends on the project size.
